

Chickens Aren't The Only Ones – Egg Directions

The chickens program teaches students about animals that lay eggs. It emphasizes that birds are not the only animals that lay eggs.

Directions:

1. Print as many copies of the animal sheet as you need for each student in the class to receive one animal.
2. Cut out the animals and place one animal in each of the plastic eggs.
3. Before the session begins, give each student one egg to hold. They should not open it until told to do so. (You can also have them put their egg under their seat so it is not a temptation).
